## Chapter 2: Visual Description of Data

# EL Mechry, EL Koudouss 

Fordham University

February 5, 2021

## Introduction

In this chapter we will cover:

- Frequency distributions.
- Histograms.
- Bar Charts
- Line Graphs
- Pie Charts
- Scatter Diagrams

## Frequency distribution

Data usually comes raw: not arranged or organized in any meaningful manner.
The frequency distribution is a table that:

- Divides the data values into classes, and
- Shows the number of observed values that fall into each class.

## Frequency distribution: Example

The following data shows the age at death of 58 English monarchs.
3034554068431513677724464735685057597090 $485032246541 \quad 1669826824674952664244514382$ $454827336253781971565665 \quad 565933337250$

To make sense of this data, we start by sorting it from smallest to largest.

| 13 | 15 | 16 | 19 | 24 | 24 | 24 | 27 | 30 | 32 | 33 | 33 | 33 | 34 | 35 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 40 | 41 | 42 | 43 | 43 | 44 | 45 | 46 | 47 | 48 | 48 | 49 | 50 | 50 | 50 |
| 51 | 52 | 53 | 55 | 56 | 56 | 56 | 57 | 59 | 59 | 62 | 65 | 65 | 66 | 67 |
| 67 | 68 | 68 | 68 | 69 | 70 | 71 | 72 | 77 | 78 | 82 | 82 | 90 |  |  |

Now you can see that few kings died within the $[10-20)$, [20-30), and $[80-90)$ age ranges, while most kings died in the $[30-40)$, $[40,50)$, and $[50,60)$ age ranges.

## Frequency distribution: Example, continued

The frequency distribution, a step by step construction:

- Sort the data
- Divide the data to classes or categories. The number of classes chosen is a judgment call.
- Classes must be mutually exclusive (they don't overlap) and exhaustive (they cover the whole range of the data).
- Count the frequency of observations in each class. That is, count the number of data values falling within each class.
- Assemble the classes and their corresponding frequencies in a table, see the table below.

## Frequency distribution: Example, continued

| Age <br> Range | Frequency |
| :---: | :---: |
| $[10,20)$ | 4 |
| $[20,30)$ | 4 |
| $[30,40)$ | 7 |
| $[40,50)$ | 12 |
| $[50,60)$ | 13 |
| $[60,70)$ | 10 |
| $[70,80)$ | 5 |
| $[80,90)$ | 2 |
| $[90,100)$ | 1 |

## Relative and Cumulative Frequency Distributions

- Relative Frequency Distribution:
- Describes the proportion or percentage of data values that fall within each category.
- Useful in comparing two groups of unequal size.
- Cumulative Frequency Distribution
- Lists the number of observations that are within or below each of the classes.
- Cumulative Relative Frequency Distribution
- Shows the percentage of observations falling at or below a certain class limit.

## Frequency distribution: Example, continued

| Age <br> Range | Frequency | Cumulative <br> Frequency | Relative <br> Frequency (\%) | Cumulative <br> Relative <br> Frequency (\%) |
| :---: | :---: | :---: | :---: | :---: |
| $[10,20)$ | 4 | 4 | 6.9 | 6.9 |
| $[20,30)$ | 4 | 8 | 6.9 | 13.8 |
| $[30,40)$ | 7 | 15 | 12.1 | 25.9 |
| $[40,50)$ | 12 | 27 | 20.7 | 46.6 |
| $[50,60)$ | 13 | 40 | 22.4 | 69 |
| $[60,70)$ | 10 | 50 | 17.2 | 86.2 |
| $[70,80)$ | 5 | 55 | 8.6 | 94.8 |
| $[80,90)$ | 2 | 57 | 3.4 | 98.3 |
| $[90,100)$ | 1 | 58 | 1.7 | 100 |

## The Histogram

- The histogram is a visualization of the frequency distribution.
- It represents each class in the frequency distribution with a rectangle proportional in length to the corresponding frequency.
- That is, a class with frequency 5 gets represented by a rectangle of length 5 and a class with frequency 10 gets represented by a rectangle of length 10 .

A histogram of the age at death of English monarchs

## The Frequency Polygon

- The frequency polygon consists of line segments connecting the midpoints of each class with its corresponding frequency.
- Relative frequencies or percentages may also be used in constructing the frequency polygon.
- Empty classes are included at each end so the curve intersects the horizontal axis.

## The Frequency Polygon: Age at Death

## The Ogive: Age at Death

The ogive, a graphical display providing cumulative values for frequencies, relative frequencies, or percentages

## Exampie - Histooram of

Distribution of annual household income in the United States
2010 estimate

Source: U.S. Census Bureau, Current Population Survey, 2011 Annual Social and Economic Supplement

## Example 2: Student Loans

Using data in the table below:

- Construct frequency distribution table. Use intervals starting at 18900 , incrementing by 2200 .
- Add relative and cumulative frequencies to the table you created above
- Plot the frequency distribution in a Histogram

Table 1: Average student loans per student by state

| UT: 18921 | NM: 18969 | NV: 20211 | CA: 21382 | AZ: 22609 | LA: 23025 | OK: 23430 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| WY: 23708 | HI: 24554 | WA: 24804 | FL: 24947 | CO: 25064 | NC: 25218 | AR: 25344 |
| TN: 25510 | KS: 25521 | MO: 25844 | KY: 25939 | SD: 26023 | ID: 26091 | OR: 26106 |
| MS: 26177 | TX: 26250 | NE: 26278 | VA: 26432 | GA: 26518 | AK: 26742 | WV: 26854 |
| MT: 26946 | ND: 27425 | MD: 27457 | NY: 27822 | NJ: 28318 | WI: 28810 | IL: 28984 |
| VT: 29060 | SC: 29163 | IN: 29222 | OH: 29353 | MA: 29391 | AL: 29425 | MI: 29450 |
| IA: 29732 | CT: 29750 | ME: 30908 | MN: 31579 | RI: 31841 | PA: 33264 | NH: 33410 |
| DE: 33808 | DC: 40885 |  |  |  |  |  |

## Example 2: Student Loans, continued

Loans<br>[18900, 21100)<br>[21100, 23300)<br>[23300, 25500)<br>[25500, 27700)<br>[27700, 29900)<br>[29900, 32100)<br>[32100, 34300)<br>[34300, 36500)<br>[36500, 38700)<br>[38700, 40900)

## Example 2: Student Loans, continued

| Loans | Frequency |
| :---: | :---: |
| $[18900,21100)$ | 3 |
| $[21100,23300)$ | 3 |
| $[23300,25500)$ | 8 |
| $[25500,27700)$ | 17 |
| $[27700,29900)$ | 13 |
| $[29900,32100)$ | 3 |
| $[32100,34300)$ | 3 |
| $[34300,36500)$ | 0 |
| $[36500,38700)$ | 0 |
| $[38700,40900)$ | 1 |

## Example 2: Student Loans, continued

| Loans | Frequency | Cumulative <br> Frequency |
| :---: | :---: | :---: |
| $[18900,21100)$ | 3 | 3 |
| $[21100,23300)$ | 3 | 6 |
| $[23300,25500)$ | 8 | 14 |
| $[25500,27700)$ | 17 | 31 |
| $[27700,29900)$ | 13 | 44 |
| $[29900,32100)$ | 3 | 47 |
| $[32100,34300)$ | 3 | 50 |
| $[34300,36500)$ | 0 | 50 |
| $[36500,38700)$ | 0 | 50 |
| $[38700,40900)$ | 1 | 51 |

## Example 2: Student Loans, continued

| Loans | Frequency | Cumulative <br> Frequency | Relative <br> Frequency |
| :---: | :---: | :---: | :---: |
| $[18900,21100)$ | 3 | 3 | 0.06 |
| $[21100,23300)$ | 3 | 6 | 0.06 |
| $[23300,25500)$ | 8 | 14 | 0.16 |
| $[25500,27700)$ | 17 | 31 | 0.33 |
| $[27700,29900)$ | 13 | 44 | 0.25 |
| $[29900,32100)$ | 3 | 47 | 0.06 |
| $[32100,34300)$ | 3 | 50 | 0.06 |
| $[34300,36500)$ | 0 | 50 | 0.00 |
| $[36500,38700)$ | 0 | 50 | 0.00 |
| $[38700,40900)$ | 1 | 51 | 0.02 |

## Example 2: Student Loans, continued

| Loans | Frequency | Cumulative <br> Frequency | Relative <br> Frequency | Cumulative <br> Relative Freq. |
| :---: | :---: | :---: | :---: | :---: |
| $[18900,21100)$ | 3 | 3 | 0.06 | 0.06 |
| $[21100,23300)$ | 3 | 6 | 0.06 | 0.12 |
| $[23300,25500)$ | 8 | 14 | 0.16 | 0.28 |
| $[25500,27700)$ | 17 | 31 | 0.33 | 0.61 |
| $[27700,29900)$ | 13 | 44 | 0.25 | 0.86 |
| $[29900,32100)$ | 3 | 47 | 0.06 | 0.92 |
| $[32100,34300)$ | 3 | 50 | 0.06 | 0.98 |
| $[34300,36500)$ | 0 | 50 | 0.00 | 0.98 |
| $[36500,38700)$ | 0 | 50 | 0.00 | 0.98 |
| $[38700,40900)$ | 1 | 51 | 0.02 | 1 |

## Example 2, continued

## The Bar Chart

The bar chart is usually used to represent qualitative or categorical data.
Example: Consider the following table from MTA on the ten busiest subway stations in 2015.

| Station | Annual Ridership |
| :--- | :---: |
| Times Sq-42 St | $66,359,208$ |
| Grand Central-42 St | $46,737,564$ |
| 34 St-Herald Sq | $39,541,865$ |
| 14 St-Union Sq | $35,320,623$ |
| 34 St-Penn Station | $28,309,160$ |
| 34 St-Penn Station | $26,147,434$ |
| 59 St-Columbus Circle | $23,299,666$ |
| Fulton St | $21,671,684$ |
| Lexington Av | $21,407,792$ |
| 86 St | $20,890,828$ |

## The 10 busiest NYC subway stations, 2015

## Bar Chart: Another example

The table below shows age at accession and duration of reign for the 10 longest ruling monarchs.

| Monarch | Age at <br> accession | Duration <br> of Reign |
| :--- | :---: | :---: |
| Queen Elizabeth II | 26 | 65 |
| Queen Victoria | 18 | 64 |
| King George III | 22 | 59 |
| King Henry III | 9 | 56 |
| King Edward III | 14 | 50 |
| Queen Elizabeth I | 25 | 44 |
| King Henry VI | 1 | 39 |
| King Aethelred II The Unready | 10 | 38 |
| King Henry VIII | 18 | 38 |
| King Henry I | 32 | 35 |

## Bar chart: duration of reign \& age at accession

## Line Graph: US unemployment

The line graph is good for simultaneously showing values of two quantitative variables.

## Line Graph: US Real GDP

## The Pie Chart

- The pie chart is a circular display divided into sections based on the number of observations within each category.
- It is constructed dividing the 360 degrees of a circle relatively among the categories being compared.
- The angle used for each piece of the pie can be calculated as: Number of degrees for the category $=$ Relative value of the category $\times 360$

## The Pie Chart: Example

The following table shows data for summer Olympic medals from 1896 to 2008.

| Country | Medals | Percentage | Angle |
| :--- | :---: | :---: | :---: |
| United States | 4335 | 15 | $53^{\circ}$ |
| Soviet Union/Russia | 2687 | 9 | $33^{\circ}$ |
| United Kingdom | 1594 | 5 | $20^{\circ}$ |
| France | 1314 | 4 | $16^{\circ}$ |
| Italy | 1228 | 4 | $15^{\circ}$ |
| Germany | 2526 | 9 | $31^{\circ}$ |
| Other | 15532 | 53 | $191^{\circ}$ |
| Total | 29216 | 100 | $360^{\circ}$ |

## The Pie Chart: Olympic Medals 1896 to 2008

## Pie Chart, Example

The table below shows U.S. federal spending by category. Use this information to create a pie chart.

| Sector | Total Spending |
| :--- | :---: |
| Pensions | 984 |
| Health Care | 1106 |
| Education | 120 |
| Defense | 115 |
| Welfare | 368 |
| Protection | 33 |
| Transportation | 93 |
| General Government | 43 |
| Other Spending | 52 |
| Interest | 241 |
| Total | 3155 |

## Pie Chart example, continued

| Sector | Spending |
| :--- | :---: |
| Pensions | 984 |
| Health Care | 1106 |
| Education | 120 |
| Defense | 115 |
| Welfare | 368 |
| Protection | 33 |
| Transportation | 93 |
| General Government | 43 |
| Other Spending | 52 |
| Interest | 241 |
| Total | 3155 |

## Pie Chart example, continued

| Sector | Spending | Share |
| :--- | :---: | :---: |
| Pensions | 984 | 0.312 |
| Health Care | 1106 | 0.351 |
| Education | 120 | 0.038 |
| Defense | 115 | 0.036 |
| Welfare | 368 | 0.117 |
| Protection | 33 | 0.010 |
| Transportation | 93 | 0.029 |
| General Government | 43 | 0.014 |
| Other Spending | 52 | 0.016 |
| Interest | 241 | 0.076 |
| Total | 3155 | 1.000 |

## Pie Chart example, continued

| Sector | Spending | Share | Angle |
| :--- | :---: | :---: | :---: |
| Pensions | 984 | 0.312 | 112 |
| Health Care | 1106 | 0.351 | 126 |
| Education | 120 | 0.038 | 14 |
| Defense | 115 | 0.036 | 13 |
| Welfare | 368 | 0.117 | 42 |
| Protection | 33 | 0.010 | 4 |
| Transportation | 93 | 0.029 | 11 |
| General Government | 43 | 0.014 | 5 |
| Other Spending | 52 | 0.016 | 6 |
| Interest | 241 | 0.076 | 27 |
| Total | 3155 | 1.000 | 360 |

## The scatter diagram, or Scatterplot

The scatter plot is a chart of two variables plotted against each other. Usually the scatter plot tells a story, most often revealing a correlation (positive or negative) in a large amount of data.

The two variables are referred to as the dependent variable, $y$, and the independent variable, $x$.

We are usually interested in how $x$ predicts $y$.
We can fit a "best fit" line in the scatter plot.
The direction of the best fit line determines whether the relationship between the two variables is direct (positive), inverse (negative), or nonexistent. The shape of the line determines whether the relationship is linear or non-linear (curvilinear)

| Temperature <br> $\mathrm{C}^{\circ}$ | Ice Cream <br> Sales | Hot Chocolate <br> Sales | Onion <br> Sales | Electricity <br> Bill |
| :---: | :---: | :---: | :---: | :---: |
| $11.9^{\circ}$ | 185 | 603 | 463 | 500 |
| $14.2^{\circ}$ | 215 | 549 | 475 | 450 |
| $15.2^{\circ}$ | 332 | 533 | 457 | 300 |
| $16.4^{\circ}$ | 325 | 473 | 501 | 250 |
| $17.2^{\circ}$ | 408 | 455 | 465 | 200 |
| $18.1^{\circ}$ | 421 | 448 | 499 | 150 |
| $18.5^{\circ}$ | 406 | 445 | 457 | 150 |
| $19.4^{\circ}$ | 412 | 443 | 501 | 180 |
| $22.1^{\circ}$ | 522 | 386 | 444 | 250 |
| $22.6^{\circ}$ | 445 | 381 | 472 | 300 |
| $23.4^{\circ}$ | 544 | 296 | 496 | 450 |
| $25.1^{\circ}$ | 614 | 273 | 450 | 500 |

## Positive Correlation: Example

The figure below shows a direct (positive) relationship between ice-cream sales and temperature. A direct relationship exists when variables increase and decrease together.

## Negative Correlation: Example

The figure below shows an inverse (negative) relationship between hot chocolate sales and temperature. A inverse relationship exists when variables increase and decrease in opposite directions.

## Nonlinear relationships: Example

The figure below shows the relationship between temperature and the cost of electricity. Basically, it shows electric bills are high in extreme temperatures, both cold and hot.

## No Correlation: Example

The figure below shows the relationship between onions' sales and temperature. Basically, it shows onion sales are not related to temperature.

## Onion Sales

## Correlation versus causation

If one thing causes the other, then they are most certainly correlated. However, just because two things are correlated doesn't mean one causes the other. When the correlation of two variables is theoretically implausible, we say there is a spurious correlation between these variables.

## Examples of some spurious correlations

Discover more fascinating spurious correlations
